Components

1	Power/Record button and indicator
2	Display
3	E1 (Ex) electrode connectors E2 (Ey) electrode connectors
4	Ground electrode connector
5	12VDC power input
6	LAN connector
7	GPS antenna connector
8	H1 (Hx) magnetic sensor connector H2 (Hy) magnetic sensor connector H3 (Hz) magnetic sensor connector
9	SD card button and indicator
10	SD card slot and cover

Creating a Configuration File

Open **EMpower** and click the **Prepare** button
Complete the required information

1. Select the **Receiver Type**
2. **Recording**
 - 2.1. **MT - Configuration Creator**
3. **Calibration**
 - 3.1. Sensor Calibration
 - 3.2. Receiver Calibration
 - No additional configuration needed
4. **System tests**
 - 4.1. White Noise
 - 4.2. Parallel Noise - **Configuration Creator**
 - 4.3. Self Test
 - No additional configuration needed

The screenshots illustrate the following steps:

- 1. Receiver Type:** The 'Prepare' button is highlighted in the main window. The 'Prepare - EMpower' dialog shows 'Receiver Type' set to 'MTU-5D'.
- 2. Recording:** The 'Recording' tab is selected. The 'MT' button is highlighted, leading to the 'Sensor configuration - EMpower' dialog.
- 3. Calibration:** The 'Calibration' tab is selected. The 'Sensor' button is highlighted, leading to the 'Sensor configuration - EMpower' dialog. The 'Receiver' button is also highlighted.
- 4. System Tests:** The 'System Tests' tab is selected. The 'White Noise' button is highlighted, leading to the 'Prepare - EMpower' dialog with 'Broadband' selected for the white noise source.

The 'Sensor configuration - EMpower' dialog shows the following configuration:

Enabled	Receiver Type	Sensor Type	Serial number
<input checked="" type="checkbox"/>	H1	MTC-150	0
<input checked="" type="checkbox"/>	H2	MTC-150	0
<input checked="" type="checkbox"/>	H3	MTC-150	0

All enabled magnetic channels require a unique, non-zero serial number.

The 'Select target location' dialog shows the file explorer with 'config.json' selected.

The 'Prepare - EMpower' dialog shows the 'Broadband' button selected for the white noise source.

Licensed until 2023

Configuration Creator

1. Check that the **Receiver type** is **MTU-5D**
2. Select the **Schedule**
 - 2.1. **Manual** or **Automatic Start**
 - 2.2. Or for a specific schedule use, **Single Shot**, **Daily** or **Weekly** and click **Add Schedule** to define the time and date
3. **Channels Settings**
4. Define the Receiver Settings **Sampling Mode** and/or **Sampling Rate**
5. **Configuration Layout**

This section is used for inputting the parameters and instrument details that will be used for the recording

Electric Channel Settings

1. Select the **Electric** channel
2. **Enable** or **Disable** the channel(s)
 - Disable the channel(s) if you do not plan to use them during the recording (*This will save space on the SD card.*)
3. Complete the information in the **Electric channel settings**

Magnetic Channel Settings

1. Select the **Magnetic** channel
2. **Enable** or **Disable** the channel(s)
 - Disable the channel(s) if you do not plan to use them during the recording (*This will save space on the SD card*)
3. Fill in the required information on the **Magnetic channel settings**

i Channel settings can be configured by using the right-click menu or by using the Magnetic channel settings section

Saving a Configuration File

1. The Computer must be equipped with an SD card slot or use a USB card reader
2. Click the **File** menu
 - **Save** or **Ctrl+S**
 - **Select the SD card**
 - **EMpower** will automatically create the file "**config.json**"
3. Save the configuration file (**config.json**) in the root folder of the **SD card**
4. Open the file Explorer
 - Right click **SD card** drive
 - **Select Eject** option
 - **Pull out the SD Card**

Only SD cards supplied by Phoenix are supported. Other SD cards that comply with the SDXC standard may work depending on the card rating and environmental conditions

MTU-5D Connections

Start by connecting:

1. Ground electrode
2. Electrodes to channel **E1**(Ex) (N+, S-) and channel **E2**(Ey) (E+, W-)
3. Magnetic sensors to channels **H1**(Hx), **H2**(Hy) and **H3**(Hz)
4. GPS antenna
5. 12V DC Power Source
6. Network connector

In the field, it is often most efficient to connect the components to the receiver following the order on the right

SD Card - Recording Data

Recording

1. Insert the **SD card**
2. To turn on the receiver, press the **Power** button briefly
 - 2.1. Wait until both **LEDs** are solid blue
 - 2.2. **Automatic Start** recording
**For any problem with the SD Card, check the Troubleshooting manual*
3. If the schedule type was configured as **Manual**, press the **Power** button to start recording

- 2 Press the power button briefly and release

	Starting	Acquiring GPS	Ready
Power	 		
SD			

- 2.1 **Automatic Start**
The recording starts automatically according to the schedule

- 2.2

	Recording
Power	 
SD	 

- 3 Press the power button briefly and release

	Ready	Channels Detection	Recording
Power		 	 
SD			 

Indicators

-  *Rapid, equal pulses*
-  *Solid color / Off*

Stopping a recording

1. Press the **Power** button briefly and release to stop recording
 - Wait until both LEDs are steady blue
2. Turn off the receiver, pressing the **Power** button for a few seconds the **LEDs** will flash red
 - Wait until both **LEDs** turn off
3. Eject the **SD card**
 - Press the **SD card** and release, pull the **SD card**

Indicators

- Rapid, equal pulses
- Solid color / Off

- 1 Press the **Power** button briefly and release

- 2 Keep pressing the power button 3 sec and release

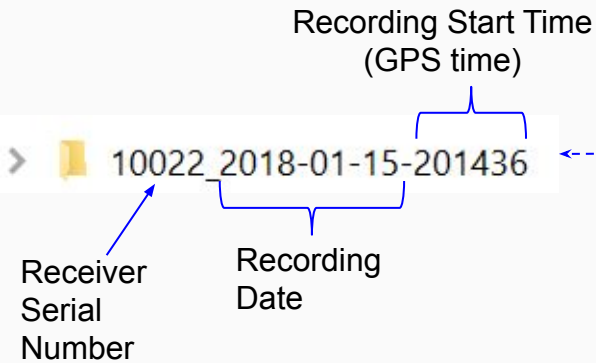

- 3

Importing and Evaluating Data

1. Click the **Evaluate** button
2. Select **View data**
3. Select the **SD card**
 - The recording creates two folders, log and recdata
4. Open the **recdata** folder and select the recording folder and click **Choose**

H2	MTC-150	MTC-150	53909	<input type="checkbox"/> Inverted	x4	10000	-0.0099
H3				<input type="checkbox"/> Inverted	N/A	N/A	N/A

H1-H3 Azimuth: 0°

View Recording Details

This section can also be used to input additional field information if desired

Process Data

1. Click the **Process** button
 - Verify that the channels and references selected are the desired ones
2. Define the time period by entering a start and end date/time
3. **Enable the electric power grid filter** that corresponds to the frequency carried by the power lines in the survey region (50Hz, 60Hz or None)
4. Click the **Process** button
5. A live display of the resistivity curve will appear after a few seconds

**This resistivity curve is not saved. It is purely for QC purposes*

The image displays the EMpower software interface for processing data. The main window, titled "Evaluate - EMpower", shows the status of the data (MB 1) and the "Process (Orthogonal)" button. A secondary window, "Serial 10125 - EMpower", shows the configuration for the magnetic channels (Hx, Hy, Hz), reference type (Magnetic), electric channels (Ex, Ey), processing timeframe (Start: 2019-03-28 15:58:56, End: 2019-03-28 16:04:09), and electric power grid filter (60 Hz). A "Magnetics Selection" dialog box shows that Hx and Hy are mandatory channels. A "Channel Selection" dialog box shows the selection of Ex and Ey channels. A final window displays a resistivity curve plot for "MB 8 Serial 10128 (Evaluation)" with Amplitude [mV] vs Frequency [Hz] and Phase [°] vs Frequency [Hz].

View Recording Details

Review that the following levels are within valid limits for quality control:

1. Battery Voltage
2. Internal Temperature
3. Number of Satellites
4. Saturated Frames
5. Time Series Level

- If saturation is not close to ~0%, review the channel configuration (see pages 4 - 6), the channel gain might be too high and/or there is artificial noise on your site
